Professional Summary

Full-stack engineer with 4+ years of experience, plus a design and marketing background. Built and shipped a React/Laravel order platform for 1,000+ business clients, and led a UI/UX redesign that lifted user satisfaction by 45%. Now finishing an MS in Computer Science, with hands-on work building RAG pipelines and LLM-powered agents alongside human-AI interaction research. Brings an end-to-end perspective across frontend, backend, UX research, and applied AI systems.

Experience

Full-stack Software Engineer (Promoted to Senior, Aug 2024)

Jul 2021 – Oct 2025

adHub Inc. (Digital Marketing Agency)

React, Laravel, Redux, React Hook Form, Material UI, SQL, REST APIs, Linux, Docker, Agile

- Built a client-facing order platform in React and Laravel serving 1,000+ business clients, modelling different product catalogues and reducing manual transaction handling by 90%.
- Redesigned the shared order lifecycle as a finite-state machine, removing legacy bypasses across multiple product lines and cutting states from 7 to 4 for some products.
- Designed a reusable custom component system on top of Material UI, replacing repeated manual assembly with ready-to-use components across multiple product lines.
- Led a UX-driven redesign spanning data collection, problem definition, UI design, and frontend implementation, delivering a 45% improvement in survey-measured user satisfaction.
- Partnered with non-technical stakeholders to define clear system specifications early, reducing time to ship by 20%.
- Mentored 3 engineers and established standardised code review practices, improving team code consistency.

Product Marketing Manager

Dec 2017 – Jul 2021

adHub Inc. (Digital Marketing Agency)

Meta Ads, Google Ads, Google Analytics, WordPress, Microsoft Dynamics 365, Motion Graphics

- Directed data-driven digital campaigns across Meta Ads and Google Ads, using Google Analytics to measure performance and reach 10,000+ potential customers.
- Managed a database of 3,000+ leads in Microsoft Dynamics 365, building automated follow-up sequences to improve outreach efficiency and pipeline tracking.
- Built and maintained responsive marketing websites on WordPress, growing site and blog traffic to 4,000+ monthly sessions.
- Created a self-produced video case study explaining our programmatic buying strategy, winning the Golden Award for Best Programmatic Buying at the Digital Singularity Awards.

Education

National Chengchi University

Sep 2025 – present

MS in Computer Science. Academic Achievement Awards (Autumn 2025 & Spring 2026)

Relevant Coursework: Web Search and Mining, Natural Language Processing, Human & Robot/AI Interaction Design

University of Antwerp

Jul 2026

Software Testing and Beyond (Summer School)

Relevant Coursework: Unit Testing, Mutation Testing, Fuzzing, Cypress-based GUI Testing, State-machine Test Design

National Taiwan Normal University

2013 – 2017

BFA in Design. Academic Achievement Awards (Autumn 2015 & Autumn 2016)

Relevant Coursework: Product Design, Web Design, Universal Design, Service Design

Projects

Customer Service AI Chatbot (freelance for a software company)

Feb 2026 - Jun 2026

Python, Gemini API, Function Calling, RAG Pipeline

- Designed and built an LLM-powered customer service chatbot for a software client, building a RAG pipeline over the client's product documentation.
- Built a modular skill-based design on top of Gemini's function calling, separating retrieval, reasoning, and action layers so new agent capabilities can be added without touching core orchestration logic.

RAG-based QA System [Link]

Python, Vector Search, LLM Orchestration, Docker, Agile

- Led a four-person team and introduced Agile practices including backlog management, Kanban, and sprints, scoping work tightly and shipping a working system on schedule.

- Designed a 3-chain LLM router with explicit branching logic to handle distinct query patterns, enabling parallel development across the team.
- Built an internal score dashboard and prompt testing tool to enable systematic A/B testing and debugging across retrieval configurations, cutting iteration cycles by 80%.

Fire & Disaster Prevention App Redesign [\[Link\]](#)

HCI, User Research, Information Architecture, Usability Testing, Prototyping

- Diagnosed core usability failures in Taiwan's disaster-prevention apps by analysing 153 low-rated App Store and Google Play reviews, isolating why 80% of users received alerts but only 40% took action, then mapped user journeys across 3 crisis stages to pivot product focus from data density to stress reduction.
- Restructured the information architecture around emergency priorities, designing intuitive flows for preparedness checklists, one-tap safety broadcasts, and emergency SOS.
- Ran usability testing that validated critical edge cases, replacing low-contrast inputs with emergency-grade visual indicators and a passive SOS message with an active, multi-sensory alarm.

Skills

Languages: JavaScript (ES6+), TypeScript, PHP, SQL, Python, Java

Frontend: React, Redux, React Hook Form, Material UI, Tailwind CSS, HTML5, CSS3

Backend & Database: Laravel, SpringBoot, REST APIs, MySQL, PostgreSQL, SQLServer

Software Testing: Unit Testing, Mutation Testing, Fuzzing, Cypress, State-machine Test Design

DevOps & Workflow: Docker, Git, Linux, Agile Development (Scrum)

AI System Engineering: RAG Pipelines, pgvector/FAISS, Ollama, Gemini API

Design & Research: UX Research, UI Design, Motion Graphics, Figma, Adobe Creative Suite
