SUMMARY

I'm a software engineer with a design and marketing background. At adHub, I built a client-facing order management platform for 1,000+ business clients, and led its UX-driven redesign, owning both the design and the React frontend. I design interfaces and build them myself. I'm completing an MS in Computer Science, where my work spans LLM systems and research on how people interact with AI.

EXPERIENCE

adHub Inc. (Digital Marketing Agency)

adHub is Taiwan's leading marketing agency focused on SMB. Having official partnerships with Meta and Google, adHub helps clients scale and optimise their marketing strategies.

Senior Software Engineer; Jul 2021 - Oct 2025 *(Promoted to Senior, Aug 2024)*

React, Laravel(PHP), Material UI, SQLServer, REST APIs

- Built a client-facing order management platform (React + Laravel) serving 1,000+ business clients; modelled complex product catalogues and reduced manual transaction handling by 90%.
- Redesigned a shared order lifecycle into an explicit finite-state machine, removing legacy bypasses to enforce strict state transitions across multiple product lines.
- Led a UX/UI redesign that delivered a 45% improvement in survey-measured user satisfaction, and built a shared component layer reused across multiple product lines to cut redundant frontend work.
- Partnered with non-technical stakeholders to define clear system specifications early, reducing time to ship by 20%.
- Migrated legacy React state management to Context API and modern hooks, removing prop-drilling to simplify component structure and speed up onboarding for new engineers.
- Mentored 3 engineers and established standardised code review practices, improving team code consistency.

Product Marketing Manager; Dec 2017 - Jul 2021

Marketing Strategy, Meta Ads, Google Ads, Google Analytics, MarTech Tools

- Directed data-driven digital campaigns across Meta Ads and Google Ads, using Google Analytics to measure performance and reach 10,000+ potential customers.
- Built and maintained responsive marketing websites independently using WordPress, taking full ownership of design, content, and deployment before formally transitioning to software engineering.
- Created a self-produced video case study explaining our programmatic buying strategy, winning the Golden Award for Best Programmatic Buying at the Digital Singularity Awards.
- Authored a digital marketing blog on marketing strategy and ad product updates, growing the audience to 1,000+ monthly readers.
- Managed a database of 3,000+ leads in Microsoft Dynamics 365, building automated follow-up sequences to improve outreach efficiency and pipeline tracking.

EDUCATION

Software Testing and Beyond (Summer School), University of Antwerp; Jun – Jul 2026

- Hands-on coursework in unit testing, mutation testing, fuzzing, Cypress-based GUI testing, and state-machine test design.

MS in Computer Science, National Chengchi University; Sep 2025 – present

- **Module:** Web Search and Mining, Natural Language Processing, Human & Robot/AI Interaction Design
- **Award:** Academic Achievement Awards (Autumn 2025 & Spring 2026)

BFA in Design, National Taiwan Normal University; 2013 – 2017

- **Key Module:** Web Design, Universal Design, Service Design

SKILL

- **Language:** JavaScript (ES6+), TypeScript, Python, PHP, SQL, Java
- **Frontend:** React, Redux, React Hook Form, React Router, HTML5, CSS3
- **Backend & Database:** Laravel, SpringBoot, MySQL, PostgreSQL, SQLServer
- **Software Testing:** Unit Test, Integration Test, End-to-End Testing, Cypress
- **DevOps & Workflow:** Docker, Git, Linux, Agile Development (Scrum)
- **AI System Engineering:** RAG Pipelines, pgvector/FAISS, Ollama, LLM Integration
- **Design & Research:** UX Research, UI Design, Figma, Human-Computer Interaction

PROJECT

Sunbird Software Inc. (NCCU Industry-Academia Partnership)

Java, SpringBoot, jOOQ, PostgreSQL, Integration Test

- Migrated legacy Hibernate HQL queries to jOOQ in a DCIM platform, and wrote integration tests to validate query equivalence.

Graduate Credit Audit System (Contributed in React/TypeScript)

React, TypeScript, Vite, Tailwind CSS, Zustand

- Led the UI/UX design and frontend implementation for a graduate degree audit system, defining type-safe TypeScript interfaces to keep API responses and component props strictly typed.
- Structured a scalable React component architecture with page-level views, reusable UI components, and centralised routing; keep the codebase maintainable as the feature set grew.

[View project →](#)

RAG-based QA System with Internal Tooling & Architecture Design

Python, Vector Search, LLM Orchestration, Docker

- Led a four-person team and introduced Agile practices (backlog, Kanban, sprint), scoping work tightly and shipping a working system on schedule.
- Designed a 3-chain LLM router with explicit branching logic to handle distinct query patterns, enabling parallel development across the team.
- Built internal observability tooling (Score Dashboard and Prompt Playground) to enable systematic A/B testing and debugging across retrieval configurations, cutting iteration cycles by 80%.
