SUMMARY

With a background in design and marketing, I have been involved in the full product lifecycle, which enables me to bring a holistic view to software engineering. I gained my professional full-stack experience at adHub, where I built an order management platform that serves 1,000+ enterprise clients. Beyond this, I led a UX/UI redesign that lifted user satisfaction scores by 45%.

After several years in the industry, I returned to university to complete an MS in Computer Science. These advanced studies have allowed me to explore state-of-the-art LLM research and applications. Moreover, I engage in Human-Computer Interaction research, exploring how people interact with AI systems to shape better user experiences.

EXPERIENCE

adHub Inc. (Digital Marketing Agency)

adHub is Taiwan's leading marketing agency focused on SMB. Having official partnerships with Meta and Google, adHub helps clients scale and optimise their marketing strategies.

Senior Software Engineer; Jul 2021 - Oct 2025 *(Promoted to Senior, Aug 2024)*

React, Laravel(PHP), Material UI, SQLServer, REST APIs

- Built a client-facing order management platform (React + Laravel) serving 1,000+ enterprise clients; modelled complex product catalogues and reduced manual transaction handling by 90%.
- Redesigned a shared order lifecycle into an explicit finite-state machine, removing legacy bypasses to enforce strict state transitions across multiple product lines.
- Led a UX/UI redesign and built a reusable frontend component library, reducing redundant development by 30% and lifting user satisfaction scores by 45%.
- Partnered with non-technical stakeholders to define clear system specifications early, reducing time to ship by 20%.
- Migrated legacy React state management to Context API and modern hooks, removing prop-drilling to simplify component structure and speed up onboarding for new engineers.
- Mentored 3 engineers and established standardised code review practices, improving team code consistency.

Product Marketing Manager; Dec 2017 - Jul 2021

Marketing Strategy, Meta Ads, Google Ads, Google Analytics, MarTech Tools

- Directed data-driven digital campaigns using Meta Ads, Google Ads, and Google Analytics, successfully reaching 10,000+ potential customers.
- Built and maintained responsive marketing websites independently using WordPress, taking full ownership of design, content, and deployment before formally transitioning to software engineering.
- Created a self-produced video case study explaining our programmatic buying strategy, winning the Golden Award for Best Programmatic Buying at the Digital Singularity Awards.

EDUCATION

MS in Computer Science, National Cheng Chi University; Sep 2025 – present

- **Key Module:** Web Search and Mining, Natural Language Processing, Robot/AI Interaction Design
- **Award:** Academic Achievement Awards (Autumn 2025 & Spring 2026)

BFA in Design, National Taiwan Normal University; 2013 – 2017

- **Key Module:** Web Design, Universal Design, Service Design
- **Award:** Academic Achievement Awards (Autumn 2015 & Autumn 2016), Bronze Award in Product Design (University Department Exhibition, 2014)

SKILL

- **Language:** JavaScript (ES6+), TypeScript, Python, PHP, SQL, Java
- **Frontend:** React, Redux, React Hook Form, React Router, HTML5, CSS3
- **Backend & Database:** Laravel, Node.js, SpringBoot, MySQL, PostgreSQL, SQLServer
- **DevOps & Workflow:** Docker, CI/CD, Git, Linux, Agile Development (Scrum)
- **AI System Engineering:** RAG Pipelines, pgvector/FAISS, Ollama, LLM Integration
- **Design & Research:** UX Research, UI Design, Figma, Human-Computer Interaction

PROJECT

Sunbird Software Inc. (NCCU Industry-Academia Partnership)

Java, SpringBoot, jOOQ, PostgreSQL, Integration Test

- Migrated legacy Hibernate HQL queries to jOOQ in a DCIM platform, and wrote integration tests to validate query equivalence.

RAG-based QA System with Internal Tooling & Architecture Design

Python, Vector Search, LLM Orchestration, Docker

- Led a four-person team and introduced Agile practices (backlog, Kanban, sprint), scoping work tightly and shipping a working system on schedule.
- Designed a 3-chain LLM router with explicit branching logic to handle distinct query patterns, enabling parallel development across the team.
- Built internal observability tooling (Score Dashboard and Prompt Playground) to enable systematic A/B testing and debugging across retrieval configurations, cutting iteration cycles by 80%.

TermiGenie: Emotionally Intelligent Terminal Agent

Node.js, JavaScript, Human-AI-Interaction

- Conducted user research and interaction design to engineer a simulated command-line AI agent, demonstrating how emotional cues in terminal interfaces increase task engagement.
- Designed and built a command-line AI agent to study the impact of emotional cues on user engagement, leading to a paper prepared for conferences.
