### EXPERIENCE

---

#### **adHub Inc. (Digital Marketing Agency)**

*adHub is Taiwan's leading marketing agency focused on SMBs. Having official partnerships with Meta and Google, adHub helps clients scale and optimise their marketing strategies.*

#### **Senior Software Engineer; Jul 2021 - Oct 2025** *(Promoted to Senior, Aug 2024)*

React, Laravel, Material UI, SQL Server, REST APIs

- Built a client-facing order management platform (React + Laravel) serving 1,000+ business clients; modelled complex product catalogues and reduced manual transaction handling by 90%.
- Redesigned a shared order lifecycle into an explicit finite-state machine, removing legacy bypasses to enforce strict state transitions across multiple product lines.
- Led a UX/UI redesign that delivered a 45% improvement in survey-measured user satisfaction, and built a shared component layer reused across multiple product lines to cut redundant frontend work.
- Partnered with non-technical stakeholders to define clear system specifications early, reducing time to ship by 20%.
- Migrated legacy React state management to Context API and modern hooks, removing prop-drilling to simplify component structure and speed up onboarding for new engineers.
- Mentored 3 engineers and established standardised code review practices, improving team code consistency.

#### **Product Marketing Manager; Dec 2017 - Jul 2021**

Marketing Strategy, Meta Ads, Google Ads, Google Analytics

- Directed data-driven digital campaigns across Meta Ads and Google Ads, using Google Analytics to measure performance and reach 10,000+ potential customers.
- Built and maintained responsive marketing websites independently using WordPress, taking full ownership of design, content, and deployment before formally transitioning to software engineering.
- Created a self-produced video case study explaining our programmatic buying strategy, winning the Golden Award for Best Programmatic Buying at the Digital Singularity Awards.
- Managed a database of 3,000+ leads in Microsoft Dynamics 365, building automated follow-up sequences to improve outreach efficiency and pipeline tracking.

### EDUCATION

---

#### **Software Testing and Beyond (Summer School), University of Antwerp; Jun – Jul 2026**

- Hands-on coursework in unit testing, mutation testing, fuzzing, Cypress-based GUI testing, and state-machine test design.

#### **MS in Computer Science, National Chengchi University; Sep 2025 – present**

- **Modules:** Web Search and Mining, Natural Language Processing, Human & Robot/AI Interaction Design
- **Awards:** Academic Achievement Awards (Autumn 2025 & Spring 2026)

#### **BFA in Design, National Taiwan Normal University; 2013 – 2017**

- **Key Modules:** Web Design, Universal Design, Service Design

## PROJECTS

---

### Order Management Platform Redesign (adHub)

UX Research, UI design, Frontend refactoring

- Identified usability bottlenecks through screen recordings and user surveys, then rebuilt the mobile layout with bottom navigation, larger touch targets, and collapsible data sections.
- Separated two context-switching hidden menus into a persistent hover-to-expand sidebar, raising views of previously buried secondary pages by 20-30%.

[View project →](#)

### Fire & Disaster Prevention App Redesign

HCI, User Research · Prototyping · Usability Testing

- Mapped user needs across three crisis stages (pre-disaster, active, recovery) and built a persona around the anxiety of never feeling prepared enough, which shifted our focus from giving information to reducing that anxiety.
- Restructured the information architecture around emergency priority and designed flows for preparedness checklists, one-tap safety broadcast, and single-tap SOS.
- Ran usability testing and iterated: replaced low-contrast checkboxes with high-contrast indicators, and changed a passive SOS into an active alarm-and-light signal.

### RAG-based QA System with Internal Tooling & Architecture Design

Python, FAISS, Ollama, LLM Orchestration, Docker

- Designed a 3-chain LLM router with explicit branching logic to handle distinct query patterns, enabling parallel development across the team.
- Built internal observability tooling (Score Dashboard and Prompt Playground) to enable systematic A/B testing and debugging across retrieval configurations, cutting iteration cycles by 80%.

### TermiGenie: Emotionally Intelligent Terminal Agent

Node.js, JavaScript, Human-AI-Interaction

- Conducted user research and interaction design to engineer a simulated command-line AI agent, demonstrating how emotional cues in terminal interfaces increase task engagement.
- Designed and built a command-line AI agent to study the impact of emotional cues on user engagement, leading to a paper prepared for conferences.

## SKILLS

---

- **Language:** JavaScript (ES6+), TypeScript, Python, PHP, SQL, Java
- **Frontend:** React, Redux, React Hook Form, React Router, HTML5, CSS3
- **Backend & Database:** Laravel, Spring Boot, MySQL, PostgreSQL, SQL Server
- **DevOps & Workflow:** Docker, Git, Linux, Agile Development (Scrum)
- **Software Testing:** Unit Test, Integration Test, End-to-End Testing, Cypress
- **Design & Research:** UX Research, UI Design, Figma, Human-Computer Interaction
